

LISTING OF THE CLAIMS:

1. (Currently Amended) A hybrid munition device comprising

a nose,

[a] at least one first portion for delivering ~~active~~ terminal-ballistically operative elements ~~being~~ which are disposed in a region at least near the nose of the munition device,

a second portion having a terminal ballistically operative casing and an inert pressure transmission medium provided within the casing, and

a pyrotechnic device located between the first portion and the second portion both for triggering the ~~active~~ terminal-ballistically operative elements in the first portion and also for building up a pressure field through the inert pressure transmission medium of the second portion.

2. (Currently Amended) A munition device as set forth in claim 1

wherein at least one of the first portion and the second portion is in the form of ~~an interchangeable~~ a module.

3. (Previously Presented) A munition device as set forth in claim 1

wherein at least one of the first portion and the second portion is in the form of an interchangeable module.

4. (Currently Amended) A munition device as set forth in claim 1

wherein the first portion contains ~~as the active elements~~ an explosive charge selected from the group consisting of at least one of a blast charge, fragmentation charge, ~~HC~~ hollow charge or ~~P-charge~~ projectile-forming charge and a combination thereof.

5. (Currently Amended) A munition device as set forth in claim 1 including

means for directional controlling of the ~~active~~ terminal-ballistically operative elements ~~integrated therein~~.

6. (Currently Amended) A munition device as set forth in claim 5

wherein the means for directional controlling of the ~~active~~ terminal-ballistically operative elements is a shock wave guidance means.

7. (Currently Amended) A munition device as set forth in claim 5

wherein the means for directional controlling of ~~active~~ the terminal-ballistically operative elements comprises an asymmetrically ~~firing~~ fired acceleration charge.

8. (Currently Amended) A munition device as set forth in claim 5

wherein the means for directional controlling of the ~~active~~ terminal-ballistically operative elements comprises structural segments.

9 (Cancelled).

10. (Currently Amended) A munition device as set forth in claim 1 ~~including wherein the at least one first portion contains terminal-ballistically operative elements generating~~

means for accelerating bodies selected from the group consisting of spherical, cuboidal and cylindrically shaped bodies and fragments, the bodies and fragments being of equal and or different sizes and of the same and or different material materials out of the active means portion.

11. (Currently Amended) A munition device as set forth in claim 1 ~~including wherein the at least one first portion contains terminal-ballistically operative elements generating~~

means for accelerating elements selected from the group consisting of plate-shaped, ring-shaped, disk-shaped and surface elements of any contour ~~out of the active means portion~~ in at least predominantly in an axial direction.

12. (Currently Amended) A munition device as set forth in claim 4

wherein the ~~active elements are~~ explosive charge is at least predominantly axially ejected from a container.

13. (Original) A munition device as set forth in claim 11

wherein said elements are embedded in a matrix.

14. (Original) A munition device as set forth in claim 11

wherein said elements are supported against each other upon acceleration.

15. (Currently Amended) A munition device as set forth in claim 4

wherein the ~~active elements comprise~~ at least one first portion contains at least one disk-shaped element which in operation is predominantly axially accelerated and which ~~optional~~ optionally contains ~~reacting/~~ reacting or pressure-producing intermediate layers.

16. (Currently Amended) A munition device as set forth in claim 1 ~~including~~ wherein said at least one first portion comprises

a plurality of said first portions which are arranged in succession.

17. (Currently Amended) A munition device as set forth in claim 1 ~~including~~ wherein said at least one first portion comprises

a plurality of said first portions which are arranged laterally.

18. (Original) A munition device as set forth in claim 1

wherein the pyrotechnic device comprises at least one pressure-producing element.

19. (Currently Amended) A munition device as set forth in claim 18

wherein the pressure-producing element of the pyrotechnic device is connected to at least one of a positionally controlled safety and firing system and a time-controlled safety and firing system.

20. (Currently Amended) A munition device as set forth in claim 18 ~~including~~ wherein said at least one pressure-producing element comprises

a plurality of said pressure-producing elements,

wherein the pressure-producing elements are selectively actuated separately or ~~are~~ connected together by a signal transmission line, by a fuse cord or by a radio signal.

21. (Currently Amended) A munition device as set forth in claim 1 including

triggering means for triggering of the pyrotechnic device in at least one of the modes selected from a group consisting of triggering means operating in a time-programmed fashion, contact ~~means~~ fashion, mechanical ~~means~~ fashion, optical ~~means~~ fashion, electronic ~~means~~ fashion, radio ~~means~~ fashion and radar ~~means~~ fashion.

22. (Currently Amended) A munition device as set forth in claim 21

wherein [a] said triggering means ~~upon~~ during a launch phase or during ~~the~~ a flight phase is triggerable by a signal selected from a group of signals consisting of a time-controlled signal, a signal emitted upon impact, a signal emitted upon penetration and a signal emitted in the interior of a target structure

23. (Original) A munition device as set forth in claim 21 including

at least one of a target guidance system and a target recognition system for controlling the triggering means.

24. (Currently Amended) A munition device as set forth in claim 1 including

means for triggering the ~~active~~ terminal-ballistically operative elements simultaneously.

25. (Currently Amended) A munition device as set forth in claim 1 including
means for triggering the ~~active~~ terminal-ballistically operative elements in a time-displaced relationship.
26. (Currently Amended) A munition device as set forth in claim 1
wherein the second portion is combined with a ~~PELE~~ penetrator having an enhanced laterally effective portion.
27. (Previously Presented) A munition device as set forth in claim 1
wherein the second portion includes at least one central penetrator.
28. (Previously Presented) A munition device as set forth in claim 27
wherein a part of the penetrator comprises a fragmentation component.
29. (Previously Presented) A munition device as set forth in claim 27
wherein the central penetrator is in the form of a radially segmented separable element.
30. (Currently Amended) A munition device as set forth in claim 1
wherein the terminal-ballistically operative casing of the second portion ~~comprises a means selected from the group consisting~~ is made of a homogeneous material, preformed fragments, submunitions ~~and~~ or independently operative penetrators.

31. (Currently Amended) A munition device as set forth in claim 1 including
different coverings provided over at least one of the periphery and the length of the
munition device.
32. (Currently Amended) A munition device as set forth in claim 1 including
further operative portions containing elements selected from the group consisting of at
least one of submunitions, fragment pockets, liquid ~~active-means~~ terminal-ballistically
operative elements and solid ~~active-means~~ terminal-ballistically operative elements.
33. (Currently Amended) A munition device as set forth in claim 1 and further comprising
at least one of a cylindrical penetrator, a core and a core nose comprising at least one
material selected from the group consisting of ~~steel~~, hard metal and heavy metal.
34. (Original) A munition device as set forth in claim 33
wherein the core has a shock-reducing cap.
35. (Currently Amended) A munition device as set forth in claim 33
wherein a tip of the core ~~tip~~ has a shock-reducing cap.
36. (Currently Amended) A munition device as set forth in claim 33
wherein said penetrator, core and a tip of the core ~~tip~~ comprise a combination of
different materials.

37. (Original) A munition device as set forth in claim 33 and further comprising
a tip configuration selected from a stepped tip, an ogival tip and a conical tip.
38. (Original) A munition device as set forth in claim 34 and further comprising
an external-ballistic hood.
39. (Original) A munition device as set forth in claim 37 including
an axially leading active portion focusable by the nose.
40. (Currently Amended) A munition device as set forth in claim 1, including
means for aerodynamic ~~spin stabilisation~~ stabilization thereof.
41. (Original) A munition device as set forth in claim 1 and including means for aerodynamic
stabilisation thereof.
42. (Original) A munition device as set forth in claim 1 combined with an explosive
projectile.
43. (Currently Amended) A munition device as set forth in claim 1 combined with a weight
projectile comprising at least one of the materials selected from the group of materials
consisting of ~~steel~~, heavy metal and hard metal.

44. (Original) A munition device as set forth in claim 43
wherein the weight projectile includes a self-destruct device.
45. (Currently Amended) A munition device as set forth in claim 33
wherein the ~~module~~ munition device includes a self-destruct device.
46. (Original) A munition device as set forth in claim 1 combined with a guided system.
47. (Original) A munition device as set forth in claim 1 combined with a final phase-controlled system.
48. (Currently Amended) A munition device as set forth in claim 1 which includes a safety munition device self-destruct self-destructing means.
49. (Original) A munition device as set forth in claim 1 which is integrated into a missile.
50. (Original) A munition device as set forth in claim 1 which is integrated into a rocket.
51. (Previously Presented) A munition device as set forth in claim 1 which is acceleratable by a rocket drive.
52. (Previously Presented) A munition device as set forth in claim 1 which is acceleratable by a booster.

53. (Currently Amended) A munition device as set forth in claim 1 which is integrated into [a n] an underwater warhead.

54. (Previously Presented) A munition device as set forth in claim 1 which is integrated into a high-velocity torpedo.

55. (Currently Amended) An arrangement comprising at least one ~~active component~~ munition device as set forth in claim 1 which is ejectable from a system ~~such as~~ selected from the group consisting of a penetrator, projectile, container, warhead and rocket.
